

Investment Criteria – Leading-edge Environmental Technologies

[FSP Ventures](#) was founded with the goal of turning technological innovations in the field of cleantech into successful businesses. FSP Ventures perceives environmental technologies as a key factor in the integration of social welfare and environmental responsibility. Young innovative companies often have limited access to external equity. It is therefore the objective of FSP Ventures to support these businesses in gaining access to early-stage financing.

Regional & Sector Focus

FSP Ventures invests in cleantech businesses in Austria and bordering regions. The main emphasis lies on technology-driven business models based on proprietary, innovative technologies. In addition, investments in so-called build-operate-transfer models are not excluded.

Company Stage

Potential portfolio companies are very close to "proof of market" or ideally have already entered the market and are looking for further expansion capital.

Team

The company has a powerful and entrepreneurial management as well as the willingness to common forms of venture capital financing and exit capability.

Scalable Business Model

FSP Ventures looks for investments in innovative, high-growth technology companies in the cleantech sector which ideally have provided "proof of market" and whose technology has the potential to effect lasting change.

Financial Instrument

The financial instrument depends on the business model, the company stage and possible exit scenarios.
